Five 9 Reporting vs. Five 9 Performance Dashboard

Five has five flavors of reporting: Standard Reports, Custom Reports, Dashboards, Supervisor Plus and Five Performance Dashboard. Here's what you need to know about all five.

Five9 Reporting

Standard Reports

Standard reports have basically been a requirement since the beginning of CCaaS. They are expected with any CCaaS platform to gain certain levels of visibility but aren't considered very flexible.

Five9 standard reports consist of 100+ out-of-the-box reports that help gain quick access to basic contact center information like queues, agents, contacts, etc. The reports are functional and a good starting point, but don't help differentiate Five9 from competitors.

Custom Reports

Five9 custom reports can be created with more than 100+ ACD metrics that can be compiled and put into report templates, data columns, grouping, time periods and dashboards. With this feature, Five9 can pull ACD metrics to report on interactions, chats, emails, phone calls, etc. However, data from CRMs and other Five9 products is either very limited or inaccessible through Five9 custom reports.

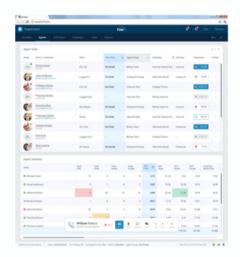

Dashboards

With Five9 standard dashboards you can visualize real-time statistics such as automatic call distribution (ACD) queues, agents, campaigns, and lists.

Supervisor Plus (additional cost)

With Five9 Supervisor Plus, supervisors gain access to real-time omnichannel statistics at their fingertips with data visualization including customizable views and multi-conditional alerts.

Five9 Performance Dashboard

Advanced Reporting & Dashboards (additional cost)

With Five9 Performance Dashboard, advanced dashboards aggregate customizable metrics and KPIs into a sleek view to offer real-time and historical reporting from agent to executive level.

While standard reporting simply gives you a pulse on how a contact center is performing, Five9 Performance Dashboard takes that feedback and helps improve upon it.

Five9 Performance Dashboard was built to aggregate third party data. It provides the best reporting on CRMs and even homegrown systems.

Five9 Performance Dashboard also provides strong gamification that comes within the dashboard like leaderboards, Wallboards, and avatars. You can also add on the full suite of gamification that includes coins, badges, marketplace and more.

USE CASE COMPARISON

It's important to know when to stick with Five9 Standard Reporting and Dashboards and when to add-on Five9 Performance Dashboard to a deal. Discover the use case for each reporting tool below.

Five9 Reporting

Comes with the purchase of Five9

Five9 standard reporting is a good solution for small contact centers who only need to access ACD data. If the call floor is small and easy to manage then standard reporting will do the trick. It's also good for companies in that category with budget restrictions.

Five9 Supervisor Plus

Add-on

Five9 Supervisor Plus is a good solution for supervisors who need to manage operations quickly and efficiently. It is also a great tool for supervisors to coach and monitor agents.

Five9 Performance Dashboard

Add-on

Five9 Performance Dashboard is nearly a necessity for any medium to enterprise-size contact center. It's the most efficient way to communicate contact center data to every level of the organization. When contact centers have hundreds or even thousands of seats they need to have a method of giving agents real-time feedback on their performance across the board. It is also considered highly important to any remote contact center. Its purpose is to aggregate data in real-time, create enterprise-wide visibility, engage agents and reduce attrition.
